

# A 5-STAR SUITE FOR YOUR HORSE

Organic forest flooring offers an excellent solution for a clean, dust-free and pleasant-smelling stable and makes your work easier.

Bio-Waldboden – Organic forest soil – available in big bags, in bags on pallets, or loose. The base bedding should be placed at a depth of 20 cm. After the bedding has settled, add more bedding to a height of 20 cm. We recommend maintaining this height to ensure the organic forest soil functions properly. When mucking out, only the horse manure is

collected with a fork and the soil is leveled. Wet patches are not discarded, but rather removed, mixed with dry organic forest soil, and placed at the edge of the stable to dry. After the regeneration phase (approx. 1-2 weeks), The organic forest soil can be

redistributed in the box. The organic forest soil can be redistributed in the box. Organic forest soil can be stored for up to 12 months if stored in a dry place and protected from UV radiation. We are happy to take back reusable bags/bags and pallets upon request.

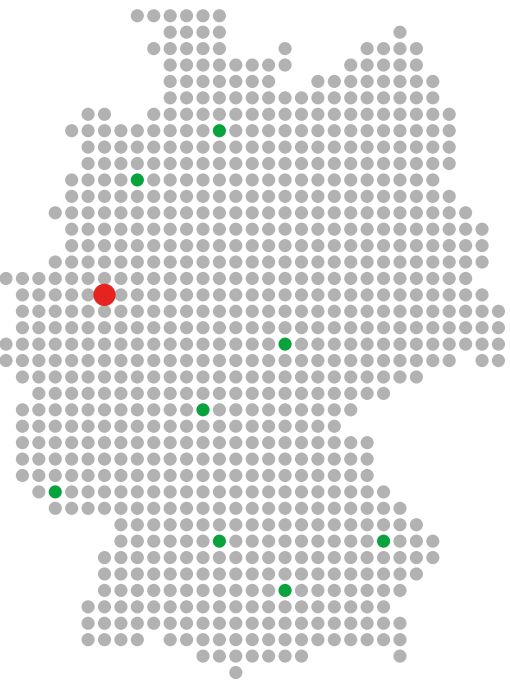

## Your benefits at a glance

## NATURAL CONDITIONS IN THE STABLE

Bedding in the stable that horses  
love and makes your work easier

## A NATURAL PRODUCT FOR YOUR ANIMAL HUSBANDRY

BIO-WALDBODEN – THE ALTERNATIVE SINGLE-BEDDED FOR A HEALTHY HORSE AND FOR YOUR WORK EASIER

Developed in Switzerland, organic forest soil makes horse husbandry easier in an economical and ecological way. Sustainable bedding, especially for animals with respiratory problems, makes work easier and saves time.

**Bio-Waldboden** is forward-looking – a win-win situation for animals, humans and nature.

## ORGANIC FOREST SOIL VERSUS STRAW and SHAVINGS

is not only good for your horses, but also for your wallet. A natural product with many benefits.

**Bio-Waldboden** is different – the microorganisms in the product decompose urine and thus prevent ammonia, which is harmful to the respiratory tract. The moisture in the product also binds dust. BW is pH-neutral – good for hoof health. Thanks to its the

springy, forest-soil-like structure creates a soft mattress that adapts to the prevailing climate—warming in winter, cooling in summer. Horses appreciate it and enjoy lying down.

Mucking out produces up to 70% less waste, and less storage space is required, as organic forest soil is available year-round.
